

versiondog Roadmap

Abstract from current implementation planning

Features	versiondog 2.1 Q1 2012 *)
Archive Manager	✓
Parallel Server	✓
Smart Compare XML	✓
Support for ADDM Agent	✓
Client-Server Communication Gateway	✓
WinCC Smart Compare extended by detail view of window contents	✓
Schneider Unity 6.0	✓
Server Synchronisation	✓ Step 3
Scripting interface extension	✓
Bosch-Rexroth screwdriver controller	✓
Cooper Power Tools	✓
Integration of PC-image handling with Drive SnapShot	✓

Preliminary
release plan:

The release
plan can
change by
projects and
customer
requirements.
Subject to
change.

*) Delivery beginning June 2012

Correct as of
April 2, 2012

versiondog Roadmap

Abstract from current implementation planning

Features	versiondog 3.0 Q3 2013
Siemens TIA Portal	✓ Step 2
Set-Point & Parameter Management	✓
Branching	✓
Daily Backup on the Server	✓
User-Wizards	✓
S7 Diagnostics & Asset Status	✓
Smart Compare & Backup of intelligent field devices	✓
Library management for more data types	✓
Smart Compare CAD	< - customer driven - >
Workflow	< - customer driven - >
Messaging System (SMS, Email)	< - customer driven - >
Wonderware System Platform	< - customer driven - >

Preliminary release plan:

The release plan can change by projects and customer requirements. Subject to change.

versiondog Roadmap

Feature Legend

- **Set Point & Parameter Management:**
 - The Set Point & Parameter Management provides backup and monitoring of set points and parameter. A scan function determines the static data areas which change not relevant for production. In addition set points and parameter can also be defined manually.
- **User-Wizards:**
 - User Wizards are „small assistants“ which e.g. assist with a configuration by examples and lead the user step by step through the necessary handling sequence.
- **Workflow:**
 - The workflow supports the approval process with two-person integrity . Versions can be checked in for approval and be released by a third party.

Preliminary
release plan:

The release
plan can
change by
projects and
customer
requirements.
Subject to
change.

Correct as of
April 2, 2012

versiondog Roadmap

Feature Legend

- **Archive Manager:**
 - The Archive Manager is used for paging and long-term archiving of data. This includes versions, backup's, etc. The Archive manager delivers a simple way of creating free server space without the need to delete important data.
- **Server Synchronisation:**
 - The server synchronisation provides the automatic exchange of defined data areas between different versiondog servers.
- **Branching:**
 - In addition to straight versioning (version 1, 2, 3...) branching provides the possibility to put on side branches to build a version tree (version 1, 2, 3... besides 1.1, 1.2, 2.1, 2.1.1, etc.).
- **Parallel Server:**
 - For the increase of performance and availability two versiondog server operate parallel. The redundancy is 100% (inclusive of redundant data archives). The load is balanced automatically between both server. If a server fails, the remaining automatically takes over alone all tasks.
- **Daily Backup on the Server:**
 - Provides a day-to-day backup on the server without creation of a new version.

Preliminary
release plan:

The release
plan can
change by
projects and
customer
requirements.
Subject to
change.

versiondog Roadmap

Feature Legend

- Report Client export interface:
 - The export interface allows you to export the currently displayed report data, taking into account the sorting and filter set. The export will take place into *. CSV format and can be analyzed with Excel or other databases and reporting tools.
- Support for ADDM Agent:
 - Siemens has discontinued their backup and versioning product ADDM.
The solution partner AUVESY delivers in connection with the ADDM Agent a certified change management solution for the SINUMERIK 840D (Power & Solution Line).
- Drive SnapShot:
 - Script extension for the image tool "Drive Snapshot" (www.drivesnapshot.com). The script manages the image creation by Drive SnapShot using the versiondog backup scheduler. No software needs to be installed on the Client-PC. The image creation can be done in the running mode of the PC without the need to reboot. There is no need to be personally in front of the Client-PC.

Preliminary
release plan:

The release
plan can
change by
projects and
customer
requirements.
Subject to
change.
